

Understand a Genetic Health Screen to optimize health and well-being

If you enrolled in the Genomic Life program, you have access to one of the most significant medical advancements. The Genetic Health Screen provides trusted insights into your health and well-being.

- → This accurate (99%) medical-grade DNA test analyzes genes to identify a predisposition to developing hereditary cancers, such as colon or breast cancer, cardiovascular diseases, and other significant conditions.
- → The Genetic Health Screen is not a test that identifies or diagnoses the presence of cancer. It uncovers changes in a gene.
- → You take this simple screening at home. Once the lab receives the sample, the average turnaround time is 10-21 calendar days.
- → A genetic counselor will review and explain the results. You will also receive a clinical action plan for you and your doctor.

Knowing your genetics allows you to take preventive action to avoid disease or improve outcomes. The Genetic Health Screen empowers you to take control of your health.

Provide a saliva sample from the comfort of your home and ship it to lab

Obtain your results and review them with a genetic counselor

Access your screenings
